pText

The pure Python PDF library

These are some of the main advantages to using pText:

    100% Python
    Tested on a dataset of more than
    1000 documents
    Type-checked, 100% type-safe
    Fully documented

Think of how effortlessly you could generate invoices, bills, tickets, and much more.

With pText, you can easily create the PDF document straight from your code.

pText offers several layers of abstraction. You can work with low-level PDF syntax to have precise control over how your content is positioned.

But you can also leave the heavy lifting to our PageLayout implementations, which automatically flow content on the page, taking into account margins and other content.

	When to use Adobe Acrobat	When to use pText
Create a single document / template	X	
Create hundreds of documents, on demand		X

pText supports all kinds of content you typically see in electronic documents. Text, lists, tables, and combinations thereof. In fact, this entire document was created using pText.

pText also supports interactive features, like annotations. Those are the little sticky-notes you might see in a document after someone has added review remarks.

As well as stamps.

Actually any graphics can be used for annotations really...

Your company isn't boring. Why should your documents be?
